

## PIP QI Measures

### Accurately recording CVD risk factors using Medical Director

Note: In order to maintain a high level of data quality, regularly archive patients not seen by the practice within a specified timeframe e.g. 2 years.

<b>Measure:</b> Proportion of patients with the necessary risk factors assessed to enable CVD assessment	
<b>Modifiable risk factors</b>	
Smoking status	<p>Regularly (at least once annually) update smoking status on patient record by:</p> <ul style="list-style-type: none"> <li>• Click on <b>Smoking History</b></li> <li>• Review status</li> <li>• Select <b>New Assessment</b> and record details</li> <li>• <b>Save.</b></li> </ul> <p>Note: If no change since previous smoking assessment, add a note in the 'Comments' field to indicate that the status was checked.</p>
Blood pressure	<ul style="list-style-type: none"> <li>• Open patient record (<b>F2</b>)</li> <li>• Click on <b>Tools &gt; Toolbox &gt; Blood Pressure</b></li> <li>• Record both systolic and diastolic blood pressure values in the allocated fields.</li> <li>• <b>Save.</b></li> </ul>
Serum lipids	<p>To enter cholesterol data manually:</p> <ol style="list-style-type: none"> <li>1. Click <b>Tools &gt; Toolbox &gt; CVD Risk:</b></li> <li>2. Enter Total cholesterol – total cholesterol (in mmol/L)</li> <li>3. Enter HDL Cholesterol – HDL (in mmol/L)</li> </ol> <p>Note: cholesterol results will automatically populate these fields when actioned from Holding File.</p> <p><b>Tip:</b> In the 'Results' tab, view atomised results by clicking on 'Cumulative Results' button at the bottom of the page.</p>
Waist circumference and BMI	<ul style="list-style-type: none"> <li>• Click on <b>Tools &gt; Toolbox &gt; Weight</b></li> <li>• Enter waist and hip measurements (in cm) to calculate waist/hip ratio</li> <li>• Enter height and weight (to calculate BMI)</li> <li>• <b>Save.</b></li> </ul>

Nutrition	<p>Document patient nutrition details in progress notes OR</p> <p>Use the <b>Nutrition Assessment brochure in Patient Education</b> to document patient nutrition details:</p> <ul style="list-style-type: none"> <li>• Click on the <b>scholar icon</b> </li> <li>• Select <b>General Information</b></li> <li>• Select <b>Nutrition Assessment &gt; Mini Nutrition Assessment</b></li> <li>• Complete the form (editable PDF)</li> <li>• <b>Save</b></li> <li>• <b>Print</b></li> </ul> <p><b>Tip:</b> Click on the Green tick  on the patient education page to notate 'patient education leaflet printed' in progress notes.</p>
Physical activity level	<p>Select <b>Assessment &gt; Physical Activity</b></p> <ul style="list-style-type: none"> <li>• Click Assessment and complete current activity level</li> <li>• <b>Save</b></li> <li>• Click <b>Prescribe</b> and follow the prompts to create a physical activity prescription</li> <li>• <b>Print and Save</b></li> </ul>
Alcohol intake	<ul style="list-style-type: none"> <li>• Click on <b>Patient &gt; Details &gt; Alcohol</b></li> <li>• Click <b>New Assessment</b></li> <li>• Complete the Audit-C questions</li> <li>• <b>Save</b></li> </ul> <p>Note: If no change to alcohol consumption status since previous assessment, add a note in the 'Comments' field to indicate that the status was checked.</p>
<b>Non-modifiable risk factors</b>	
Age and gender	<p>Age: Select <b>Patient &gt; Details</b>. Ensure a date of birth has been accurately recorded on the patient record.</p> <p>Gender: Select <b>Patient &gt; Details</b>. Ensure the gender field has been completed.</p>
Family history of premature CVD	<p>Record Family history including Unknown or No significant Family History if applicable (to indicate this has been checked).</p> <p>Click on <b>Patient &gt; Details &gt; Family &amp; Social History</b></p> <p>Record family medical history details in the Family History box.</p>

<p>Social history including cultural identity, ethnicity and socioeconomic status</p>	<p>Record social history</p> <ol style="list-style-type: none"> <li>1. Click on <b>Patient &gt; Details &gt; Family &amp; Social History</b></li> <li>2. Record as a comment in Social History box</li> <li>3. <b>Save</b></li> </ol> <p>Record ethnicity in Patient Demographics:</p> <ol style="list-style-type: none"> <li>1. Select <b>Patient &gt; Details</b></li> <li>2. Click the grey <b>box</b> to the right of the Ethnicity field </li> <li>3. Enter the first few characters of the country in the search field and tick to select one or more ethnicities</li> <li>4. <b>OK</b></li> </ol> <p>Record Aboriginal &amp; Torres Strait Islander Status in Patient Demographics:</p> <ol style="list-style-type: none"> <li>1. Select <b>Patient &gt; Details</b></li> <li>2. Click <b>ATSI</b></li> <li>3. Select an entry from the drop-down list</li> <li>4. <b>OK</b></li> </ol>
<p><b>Related conditions</b></p>	
<p>Diabetes</p>	<p>Enter a <b>coded diagnosis</b> of Diabetes in the Past History on patient record</p> <ol style="list-style-type: none"> <li>1. Click on <b>Past History</b></li> <li>2. Enter the <b>date of diagnosis</b></li> <li>3. Click the red <b>+</b> sign to Add a new diagnosis</li> <li>4. Enter the first few characters of the condition and click to <b>select from the list</b></li> <li>5. Tick the relevant options (Active, Summary etc)</li> <li>6. <b>OK</b></li> </ol>
<p>CKD (albuminuria ± urine protein, eGFR)</p>	<p>Enter a <b>coded diagnosis</b> of CKD in the Past History on patient record (see steps above)</p> <p>Albuminuria – urine test (will automatically populate to Results when actioned from Holding File)</p> <p>Urine protein – urine test (will automatically populate to Results when actioned from Holding File)</p> <p>eGFR – blood test (will automatically populate to Results when actioned from Holding File)</p>

Familial hypercholesterolaemia	Enter a diagnosis of ' <b>hypercholesterolaemia</b> ' in the Family History on the patient record
Evidence of AF (history, examination, electrocardiogram)	Enter a coded diagnosis of <b>Atrial Fibrillation</b> in the Past History on the patient record
